BLOCH. Zoologica Poloniae 15 (1965), 231-242.

Thyroid gland of *Channa punctatus* shows goitrous reaction indicating hypertrophy and hyperplasia of the tissue after immersing the fish in 0.033% thiourea solution. The prolong with drawal of thyroid hormone by this means reflects the pituitary cytology. Similarly withdrawal of thyroid hormone results in the retardation of maturation of germ cells in gonads.

Italiana di Metallurgia, Napoli, 22-26 settembre 1962

Bruxelles, Settembre 1963 — 42 pagine — 13 figure

Dopo una premessa introduttiva riguardante le caratteristiche generali, il ciclo di lavorazione plastica e le possibilità di impiego pratico del SAP, vengono riportati i risultati essenziali delle ricerche svolte in semi-scala relative alle principali lavorazioni plastiche del SAP-ISML: estrusione, trafilatura, laminazione.

STUDIES OF ^{240}Pu RESONANCE ABSORPTION IN HETEROGENEOUS SYSTEMS by F. BEONIO-BROCCHIERI and E. DIANA

European Atomic Energy Community — EURATOM
Joint Nuclear Research Center — Ispra Establishment (Italy)
Reactor Physics Department — Reactor Theory and Analysis
Brussels, October 1966 — 20 Pages — 7 Figures — FB 40

Usual methods for determining the effective resonance integral of the most common fertile materials introduce some important approximations. In order to investigate how the large practical width of the ^{240}Pu resonance at 1.05 eV may invalidate these approximations a basic study has been performed by comparing, for different heterogeneous systems, the results obtained with sophisticated methods to the results given by the more usual ones (Nordheim, Chernick and Vernon, Cohen and Goldstein). The same calculation methods have been tested against the experimental values measured by Nichols at Hanford.
