MAC-RAD is a Revised And Developed edition of the Multi-group Attenuation Code MAC (Peterson, E.G. HW. 73381, April 1962).

This program gives, for slab geometries, the following informations as a function of distance from the core boundary :

1. Multigroup neutron fluxes
2. Neutron dose rates
3. Approximate neutron spectrum

Petrografia da ilha de S. Vicente — Novos elementos para o seu conhecimento.

*Garcia de Orta* (Lisboa) vol. 13 (n.º 2): 235-258, 1965

Estudo de rochas da ilha de S. Vicente (arquipélago de Cabo Verde). Entre as rochas básicas encontram-se fonólitos, basanitos, basanitóides, nefelinitos, etinditos e ankaratritos. As rochas granulares são representadas por sienitos, gabros, ijolitos e melteigitos. Identificaram-se ainda doleritos, teschenitos e lamprófiros, bem como rochas brechóides e rochas carbonato-feldspatóidicas. As características predominantes das rochas da ilha são a sua deficiência em sílica e o exagero de carácter hipossaturado, o que revela carácter acidentalmente atlântico e leva a supor a não assimilação de materiais siálicos
