L. 4.3 63

CRAIG, G. Y., 1969. Communication in geology  
*Scott. J. Geol.*, 5 (4), 305-321

Many geological papers are too long and are poorly written. The production of geological information seems to be doubling every ten to fifteen years and has far outstripped its consumption. To improve the situation refereeing must be firmer and papers shorter and clearer. In the near future Editorial Boards will have to decide whether a paper should be retained in typescript form, or what parts should be published in a journal, photographed on microfilm-card or stored in a data bank. The decision on the best way in which the information should be presented may be based on an estimate of the number of serious readers and the financial costs involved. Some of the money at present spent on geological research should be devoted to ensuring that the results are more effectively communicated.

SYNTHESIS OF DOUBLE LABELLED CHOLESTERYL LINOLENATE AND ARACHIDONATE by A. CRASTES de PAULET and L. BARDOU (Université de Montpellier)

European Atomic Energy Community — EURATOM

Report prepared by the Faculté de Médecine de l'Université de Montpellier, France

Euratom Contract No. 036-63-5 RISF

Brussels, June 1965 — 15 pages — 5 figures

The transesterification method used by MAHADEVAN and LUNDBERG for cholesterol esters synthesis, following the scheme cholesterol acetate + fatty acid methyl ester  $\rightarrow$  cholesterol ester + methyl acetate, has been adapted to the microscale (1 to 10  $\mu$ M) imposed by the use of labelled molecules of high specific activity.

This method is particularly suitable for the synthesis of
