This report presents a FORTRAN IV program to be run by a computer IBM 1800 for calculating the isotope composition of Lithium from data obtained by optical methods with the direct reading Fabry-Pérot spectrometer (Hypeac). The results of measurements dealt with in this program are calculated automatically with high speed and precision.

L'objectif principal de la traduction humaine exige la découverte et l'emploi permanent d'un même mot de la langue cible, dont la précision soit satisfaisante, pour traduire un mot de la langue source, toutes les fois qu'il possède la même signification interne.

Dans les domaines scientifiques, techniques et légaux surtout, la cohérence du vocabulaire acquiert une grande importance. « Dicautom » répond à ce besoin. Le traducteur fait perforer les mots qu'il désire la traduction. La machine fait l'analyse morphologique de la forme demandée pour retrouver la rubrique correcte et fournir au traducteur les renseignements, c'est à dire les traductions

A summary of the results of two exponential experiments in natural uranium is given. The experiments have been performed at Los Alamos by Chezem and at Saclay by Campan, Clauzon, Kirchner, Ribon and Zaleski.

The experiments have been analyzed and a systematic difference of the relaxation lengths, measured with detectors sensitive to high

P2345

The floral anatomy, development and structure of the anther and pollen grain, ovary morphology, microsporogenesis, megasporogenesis, male and female gametophytes of *Cortesia cuneifolia* CAV. (*Boraginaceae*) have been described in this paper.

The anther wall has 4 layers of cells: epidermis, fibrous endothecium, middle layer, and tapetum of secretory type with 2-3-nucleate cells. An "Innere Tapeten" is present, but there is no "Placentoid". Delimitation of microspores is simultaneous. Tetrads are tetrahedral or decussate, but polyspory is not uncommon. Pollen grains are shed at the two celled stage. The pollen is 3-zonolept. The exine is reticulate, considerably thinner in the central part of the mesocolpia. The membrane of the colpia is psilate.

The ovary has 2 carpels and 4 loculi connected by a "compitum". Two strands of conducting tissue extend through the full length of the style; having gained access to the ovary, they fuse near the placentas,

The APACHE code has been developed to carry out automatically on the digital computer the long series of preliminary operations necessary for the study of a problem on an analog computer.

The code was first presented at the 3rd International Conference on Analog Computing, Coimbra, September 1961.

This report describes a system for sensing, processing, and recording sound velocity, sea water temperature, wave heights, ambient light, date, time, transducer depth, and certain ship motions. The system is digital and automatic. It is designed principally for use aboard submarines.

Appendix A presents oceanographic variables measured during various Modes, or submarine maneuvers; Appendix B, format codes entered into the recording system to identify data on punched tape.

Les *Culicoides* de l'Ouest Africain (2<sup>e</sup> note). Espèces apparentées à *C. similis* Carter, Ingram & Macfie, 1920. (Diptera, Ceratopogonidae).

Cah. ORSTOM, sér. Ent. méd., vol. VIII, n° 2, pp. 141-173, 10 fig., bibliogr. (16 réf.).

Dans cette deuxième note, nous étudions les espèces de *Culicoides* de la région éthiopienne apparentées à *C. similis* Carter, Ingram & Macfie, 1920, et pour lesquelles nous créons le groupe *Similis* ; parmi d'autres caractères, elles ont toutes les paramètres du mâle dentés, des apodèmes bien développés aux coxites et le bord distal du neuvième tergite muni de deux cornes latérales. Treize espèces sont signalées d'Afrique de l'Ouest, principalement du Sénégal. Six sont nouvelles : *C. perettii*, *C. kobae*, *C. vagus*, *C. camicasi*, *C. micheli* et *C. subravus*. Le mâle inconnu de *C. expectator* Clastrier et les nouvelles inconnues de *C. dispar* Clastrier et *C. vicinus* Clastrier sont également décrits.

*Cah. ORSTOM, sér. Ent méd., vol. VIII, n° 4, pp. 353-376, 9 tabl., 1 fig., bibliogr. (35 réf.).*

Dans le présent travail effectué à Bobo-Dioulasso (Haute-Volta), l'auteur étudie les divers lieux de repos des femelles de *C.p. fatigans*.

L'espèce est exophile au début du cycle gonotrophique, exophile en fin de cycle, ce comportement étant en partie lié à l'âge physiologique des femelles.

Les moustiques exophiles se réfugient surtout dans les puits dont la structure conditionne le rendement.

La prise d'un repas non sanguin a été également décrite chez cette espèce.

BERNARD (M.-R.) - 1970 -

*Simulium (Eusimulium) latinum* (Rubzov, 1962) et *Simulium  
Simulium maximum* (Knoz, 1961) (Diptera, Simuliidae) espèces  
nouvelles pour la faune de France.

*Cah. ORSTOM, sér. Ent. méd., vol. VIII, n° 4, pp. 319-322,  
bibliogr. (18 réf.).*

L'auteur signale la présence dans le sud-est de la France de deux espèces nouvelles pour la faune de France : *Simulium (Eusimulium) latinum* (Rubzov) et *Simulium (Simulium) maximum* (Knoz). Quelques données écologiques accompagnent ces observations.

ZIVKOVITCH, V. - 1970 -

Trois espèces de Simulies (Diptera, Simuliidae) qui apparaissent en masse en Yougoslavie.

Cah. ORSTOM, sér. Ent. méd., vol. VIII, n° 1, pp. 113-120, 1 carte, bibliogr. (23 réf.).

Sur cinquante-huit formes de Simulies observées en Yougoslavie, trois espèces apparaissent certaines années en masse : *S. colombaschense* (la mouche de Goloubatz) *T. maculata* et *B. erythrocephala*. Pendant les vingt-trois dernières années (de 1946 à 1969), on a noté une invasion par la première espèce en 1950, par la seconde en 1958 et par la troisième en 1965. La plus importante est *S. colombaschense* qui a provoqué, pendant l'invasion, 801 pertes chez les animaux domestiques. Quelques centaines d'oisons et de canetons sont morts à la suite des attaques de *T. maculata*, alors qu'on n'a pas constaté de pertes dues à l'activité de *B. erythrocephala*.
