STEELS FOR REACTOR VESSELS — Irradiation of Steel Samples in EL 3
at Various Temperatures and Testing after Irradiation
by M. CIBOIS, J. LEMAIRE and M. WEISZ (CEA)

European Atomic Energy Community - EURATOM
EURATOM/USA Agreement for Cooperation
EURAE C Report No. 1502 prepared by CEA
Commissariat à l'Energie Atomique, Paris (France)
Atomic Reactors Department
Euratom Contract No. 039-61-12 RDF
Brussels, March 1966 - 52 Pages - 31 Figures - FB 70

A study was made of the influence of the irradiation temperature on the damage sustained by various steels by using a series of six setups at temperatures rising from 100 to 400°C and doses in the region of $3 \cdot 10^{19}$ fast neutrons.

Certain properties were defined in the course of this study :
— For materials irradiated between 100 and 200°C, hardening generally displays

IDENTIFICATION OF RADIONUCLIDES BY SEMIQUANTITATIVE AUTORADIOGRAPHIC DETERMINATION OF HALF-LIFE BY THE RING-OVEN METHOD

In the proposed method, a series of 9 rings is prepared from different μl -volumes of a solution of the radionuclide under test (specific activity 1.5–2.5 $\mu\text{C}/\mu\text{l}$). At a starting time $t = 0$ and at 3 later times, each series of rings is placed on X-ray film strips for a period of 1 h. After the usual development of the 4 strips, 4 density scales are obtained corresponding to 4 different times, and these can be compared by the method of weighted means. From the decrease in density of the rings, the half-life of the radionuclide can be estimated. The method is explained for the examples ^{198}Au , $^{99}\text{Mo}/^{99\text{m}}\text{Tc}$, ^{153}Sm and ^{131}I .

STUDY ON THE OPTIMUM USE OF PLUTONIUM IN THE POWER
INDUSTRY by G. MEMMERT and H. WELLMANN (INTERATOM)

Commission of the European Communities

Report prepared by INTERATOM

Internationale Atomreaktorbau GmbH, Bensberg/Köln (Germany)

Euratom Contract No. 037-67-7 ECID

Luxemburg, May 1970 — 68 Pages — 18 Figures — FB 85

An investigation is made into the ways of using the plutonium produced in a number of different systems composed of conventional and nuclear power stations. In particular, the question arises whether this plutonium should be accumulated for later use in fast breeders or whether it should be recycled directly into the thermal reactors. At the same time the study deals with the question of whether it might be useful to construct special reactors, e.g., fast converters, which have a particularly high plutonium content but are also very costly.

WELSH, WILLIAM, 1967. The value of point-count modal analysis of greywackes
Scott. J. Geol., 3 (2), 318-326

The results of some simple statistical tests on modal analyses of several groups of thin-sections of greywackes are presented. The tests suggest that modal analyses are of some value in providing additional information of use for comparison purposes by a single worker using his own data but that direct comparisons between workers are severely limited by operator variance factors.

EXPERIMENTAL STUDY OF THE STRESS DISTRIBUTION IN THE
ESSOR REACTOR VESSEL WALL by P.S. WELTEVREDEN and
J.F.G. BLANCKENBURG

European Atomic Energy Community - EURATOM
ORGEL Program
Joint Nuclear Research Center
Ispra Establishment (Italy)
Engineering Department - Technology
Brussels, October 1966 - 31 Pages - 17 Figures - FB 50

The ESSOR reactor vessel contains a structural discontinuity in its cylindrical part. This discontinuity will give rise to local stress concentration in the membrane stress-field. For reasons of safety it was required to determine the amount of stress concentration to be expected and to give specifications for the construction of the vessel.

IN-PILE APPLICATION OF STRAIN GAUGES by P.S. WELTEVREDEN.

European Atomic Energy Community - EURATOM.
Joint Nuclear Research Centre - Ispra Establishment (Italy).
Technology Service.

Paper presented at the Symposium on In-Core Instrumentation, Oslo (Norway),
June 15-19, 1964.

Brussels, December 1964, 13 pages - 3 figures.

This report outlines the research on the in-pile application of strain gauges as attempted by the Technology Service of Euratom in Ispra. Its scope is merely to focus the attention on this subject. To this extent a concise description of the background of the problem is given, followed by a summary of the experimental data available in this field up to now. Next, the research program, actually in course, is presented and a point is made concerning the situation to date. Ultimately, a description of the irradiation rigs as prepared for the Ispra-I reactor and the High Flux Reactor in Petten is given, together with their out-of-pile equipment.

Although irradiations are actually in course, no definite results are yet available.

RESEARCH ON WEAR IN REACTOR CORE MATERIALS by
M. MONTAGNANI (Euratom) and P. S. WELTEVREDEN (Euratom).

European Atomic Energy Community - EURATOM
ORGEL Program

Work prepared at the "Organisatie voor Toegepast Natuurwetenschappelijk
Onderzoek" TNO, Metal Research Institute - Delft (The Netherlands)

Euratom Contract N. 040-61-9 ORGN

Paper presented at the "Convegno sui metalli non fissili nei reattori nucleari",
Bologna (Italy) - December 16-18, 1963

Brussels, July 1964, 19 pages, 9 figures

The wear research on SAP described in this report is part of the design study for the ORGEL-reactor. Before describing the wear research itself a concise description is given of the reactor concept. From this description follows the background and the necessity of the wear study.

After specification of the experimental conditions, a description is given of the wear machine, specially constructed for this study. In this machine, the operating conditions of a pressure tube are represented as close as possible.

IN-PILE APPLICATION OF STRAIN GAUGES . PRELIMINARY RESULTS by **P. WELTEVREDEN**

European Atomic Energy Community - EURATOM
ORGEL Program
Joint Nuclear Research Center - Ispra Establishment (Italy)
Engineering Department - Technology Service
Brussels, April 1966 - 26 Pages - 12 Figures - FB 40

This paper contains a description of the realisation of the first stage of an irradiation program on resistance strain gauges. The scope of this program is to establish limits on the use of resistance strain gauges in a radioactive environment. To this extend a number of strain gauges is attached to a tube-section in various compensating arrangements. The tube section is mounted inside an irradiation rig a sequently introduced in a reflector

Brüssel, März 1966 - 100 Seiten - 32 Abbildungen - FB 125

Die Auswirkungen von beruflicher Strahlenexposition wurden an 13 Personen
untersucht mittels der Unterlagen der Berufsgenossenschaften und ähnlicher
Quellen. Es wurde je nach Ausmaß der Schädigung eine Einteilung in 4 Grade
vorgenommen :

1. Leichte reversible Schädigung
gehalt des Knochenmarks und vorübergehend herabgesetztem Zell-
verminderung (7 Fälle).

Report prepared at BB/K — Brown Boveri/Krupp Reaktorbau GmbH,
Mannheim (Germany)

Association No. 003-63-1 RGAD

Brussels, March 1968 — 26 Pages — 4 Figures — FB 40

Since the beginning of the HTGR development project, the points of view concerning the design of the gas clean-up unit have undergone a shift of emphasis, moving from the active to the inactive impurities. The design criteria are essentially based on the carbon transport, i.e., corrosion of the fuel elements and carbon deposition on the steam
