REPRINT

MESSUNG DER GEMISCHTEN STRAHLUNGSFELDER IM REAKTOR  
BR2 MIT HILFE VON KALORIMETERSONDEN von R. WERZ.

*Assoziierung*: Europäische Atomgemeinschaft - EURATOM  
Centre d'Etude de l'Energie Nucléaire - C.E.N.

Bericht abgefasst im Centre d'Etude de l'Energie Nucléaire - C.E.N.,  
Mol (Belgien).

EURATOM-Vertrag Nr. 006-60-5 BRAB.

Sonderdruck aus „Nukleonik“, Band 6, Heft 1 - 1964 - Seiten 28-33.

Durch Strahlungsabsorption werden Materialproben im Innern von Reaktoren aufgeheizt. Eine Analyse des gemischten Strahlungsfeldes ergibt, dass sich die Aufheizung aus drei Komponenten zusammensetzt, für welche die thermischen Neutronen, die schnellen Neutronen und die  $\gamma$ -Strahlen verantwortlich sind. Je nach Art der gewählten Materialprobe kann eine bestimmte Strahlenkomponente mehr oder weniger für die Aufheizung verantwortlich sein. Kalorimetersonden gestatten die Strahlungsaufheizung von Materialproben zu messen und erlauben damit die Dosimetrie des gemischten Strah-

SPECTROMETRY USING RECOIL PROTON AND  $^3\text{He}$  COUNTERS, by  
C. BEETS (CEN) and R. WERZ (EURATOM).

*Association* : European Atomic Energy Community - EURATOM,  
Commissariat à l'Énergie Atomique - CEA.

Work performed at the "Centre d'Étude de l'Énergie Nucléaire", Mol/Donk  
(Belgium).

Association No 006-62-I RAAF.

Reprinted from "Bulletin d'Informations Scientifiques et Techniques du  
C.E.A.", No 81 - March 1964 - pp. 1-3.

The proportional counter permits direct measurement of the energy of  
ionizing particles; its application to neutron spectrometry is possible, through  
the use of a nuclear interaction.

We discuss the problems and recent developments in fast neutron spectro-  
metry using a hydrogen or  $\text{He}^3$  filled proportional counter.

Henryk Wesolowski: **Golgi apparatus in the cells of olfactory epithelium and olfactory glands in hen.** *Zoologica Poloniae* **21** (1971), 39-50.

The studies were carried out on the olfactory mucosa of a domestic hen.

Trabeculae of various length, small granules, larger vesicles or phase-positive spheroidal bodies have been shown in the structure of the Golgi apparatus of the supporting cells in the olfactory epithelium and the olfactory glands. In the olfactory cells, the Golgi apparatus is formed by trabeculae and oval vesicles. In the phase contrast illumination and after applying the TPP-ase reaction the element of the apparatus lie loosely in cytop<sup>asm</sup> of cells and do not form any network structure, that f<sup>r</sup> being is contrast to the impregnating methods.
