JET PUMPS by J.T. WILMAN (RCN)

European Atomic Energy Community - EURATOM

Reactor Centrum Nederland - RCN

Contract No. 007-61-6 PNIN

Brussels, December 1966 - 60 Pages - 20 Figures - FB 85

In this report a *theoretical study* of the behaviour of jet pumps is made on the basis of a simplified model. Experiments carried out with the object of optimizing the performance of jet pumps are described. It is found that the theoretically predicted results are in good agreement with the experimental data for high performance jet pumps. Finally, it is shown how, for given conditions, absolute jet pump dimensions can be calculated.

WILSON, C. D. V. 1970. Geophysical studies of the basic intrusions  
*Scott. J. Geol.*, 6 (1), 119-125

Re-examination of the gravity and magnetic anomalies over the Maud intrusion shows that it is magnetised in a direction close to that of Blundell and Read's (1958) specimens. A magnetic survey of some dykes near Straloch suggests that they are offshoots from the edge of the basic sheet.

Seismic velocities for the Macduff Slates have been obtained at two sites near the Inch mass; at one of these there is a high-velocity layer which may be gabbro.

Some of the anomalies found in the recent aeromagnetic survey by the Institute of Geological Sciences are discussed and provisional interpretations suggested.

Possible modes of emplacement of the basic sheet are discussed and the role of geophysics in the study of the sheet is reviewed.

WILSON, C. D. V., 1965. A marine magnetic survey near Lerwick, Shetland  
Isles  
*Scot. J. Geol.*, 1 (3), 225-230

A total force magnetic survey has been made of an offshore area (14 km  $\times$  12 km) near Lerwick, Shetland Isles, where the Admiralty Chart shows an anomaly in the magnetic variation. The survey shows a strong positive anomaly, suggestive of a basic rock magnetised in a direction close to that of the present Earth's field.

A block model has been fitted to the total force field, and the computed anomaly in magnetic variation agrees with that shown on the chart. Steep magnetic gradients and irregular sea-floor topography suggest that the body may outcrop on the sea floor and could be sampled by dredging.

The nature of the body is discussed; it is thought that it may be a pre-Middle Devonian intrusion.

JOHN B. WILSON, 1967. Palaeoecological studies on shell-beds and associated sediments in the Solway Firth  
*Scott. J. Geol.* 3 (2), 327-369

The sediments, living fauna, dead shells and valves of the Solway Firth tidal flats at the mouth of the River Nith were sampled along transects. The sediments, which range from inshore silts to fine sands at the mouth of the Nith, are largely derived from the Irish Sea.

The inshore living fauna includes *Cardium edule*, *Macoma balthica* (the dominant species), *Scrobicularia plana* and *Mya arenaria*. *Tellina tenuis* is restricted to the fine sands. *Cardium*, *Macoma*, *Mya* and *Mytilus edulis* valves are common in the inshore flats. *Cardium* valves are widespread. Shell fragments produced by predation and not by mechanical breakage are common.

The living fauna, shells and valves are reworked and concentrated into channel-floor shell-beds by laterally migrating ebb channels. Surface shell-beds are formed by tidal currents reworking surface sediments. The detailed differences between these two types of shell-bed are used to show that a buried shell-bed formed on a channel floor. The dominant living species suggested by the shell-bed compositions would be *C. edule*. The presence of *T. tenuis* would not be detected.

WILSON, M. J., 1969. A gibbsitic soil derived from the weathering of an ultrabasic rock on the island of Rhum

*Scott. J. Geol.*, 5 (1), 81-89

The mineralogy of a soil derived from the weathering of an ultrabasic rock near the summit area of Askival on the Island of Rhum was investigated by optical, X-ray diffraction and differential thermal techniques. The fine sand fraction is dominated by olivine and anorthitic plagioclase feldspar whilst the clay fraction contains gibbsite and chlorite. General weathering reactions in the soil are discussed and the origin of the gibbsite is considered in detail.

G. G. WINBERG: Energy flow in aquatic ecological system.  
*Pol. Arch. Hydrobiol.*, 17 (1970), 11-19.

The principles of working out a dynamic energetical budget of a total aquatic ecosystem are discussed basing upon the example of Lake Driviaty. The study comprised the biomass, production, destruction, consumption and assimilation of the main ecological groups classified according to the main trophic levels, over the vegetative period. The coefficients of production efficiency of these groups and trophic levels were also calculated as ratio of their production to biomass and assimilation. The relevance of coefficients of energy conversion for the evaluation of production efficiency of the ecosystems is discussed.

Reprinted from "Biochimica et Biophysica Acta", 80 - 1964, pages 52-62.

An electron-microscope study of the HeLa-cell cytoplasmic and nuclear 74-S ribosomes has been performed. These behave similarly when cations are removed by versene : both break up into 30-S and 50-S subunits. In the heavy part of the centrifugation gradient used to isolate the ribosomes it has been shown that 74-S ribosomes are associated in polysomes and a rough calculation has shown that it is not unreasonable to believe that as many as 40 ribosomal units or more could exist in some polysomes.

DOCHAP - A FORTRAN IV PROGRAM FOR THE CORRECTION AND  
CALIBRATION OF NEUTRON INELASTIC SCATTERING DATA  
by K. KREBS and D.J. WINFIELD

Commission of the European Communities  
Joint Nuclear Research Centre - Ispra Establishment (Italy)  
Reactor Physics Department - Experimental Neutron Physics  
Luxembourg, January 1971 - 42 Pages - 2 Figures - Bfr. 60,—

This program is used to correct raw data obtained from the Ispra-1 Double Chopper Neutron Spectrometer Facility.

Corrections available are for background, air attenuation, detector efficiency and sample thickness. In addition, the data may be normalised with spectra obtained from a vanadium reference specimen. A smoothing routine may also be utilised if the data have low statistical accuracy. The corrected data output is available in either punched, printed, or graphical format.

**EUR 4516 e**

FOLD - A CALIBRATION PROGRAM FOR THE ANALYSIS OF QUASI-ELASTIC NEUTRON SCATTERING DATA, by D.J. WINFIELD

Commission of the European Communities  
Joint Nuclear Research Center - Ispra Establishment (Italy)  
Reactor Physics Department - Experimental Neutron Physics  
Luxembourg, September 1970 - 32 Pages - 3 Figures - FB 50,—

A Fortran IV computer program has been written which gives a means of calibrating the quasi-elastic peaks obtained from the time-of-flight data of the ISPRA-1 Double Chopper Spectrometer in terms of the widths of Lorentzian distributions.

Plots of quasi-elastic peaks calculated by the numerical convolution of the instrumental resolution, which may be of any shape, with Lorentzian functions of various widths are produced by the program. These plots allow a comparison to be made with experimental quasi-elastic peak shapes. The validity of the assumption of a Lorentzian function of quasi-elastic scattering may thus be tested.

Aleksander Winnicki and Ryszard Bartel: Natural and artificial egg deformations in the Salmonid fishes. Zoologica Poloniae 18 (1968), 417-426.

The two „lateral” diameters (the long and the short) of *Salmo trutta* m. *lacustris*. L. (were) measured.

It has been found that at the beginning of the development the egg membranes possess a considerable plasticity, and that changes in the egg shape caused during the period of membrane hardening are permanent. Eggs of some other fish species were found to possess this property.

P 336

P 336

Aleksander Winnicki, Ryszard Bartel and Krzysztof Goryczko: **The effect of temperature on the uptake of water by the egg and on the hardening of the egg membranes in the rainbow trout, *Salmo gairdneri* Rich.** *Zoologica Poloniae* 18 (1968), 431-442.

Immediately after dry-spawning the eggs were placed in crystallizing dishes containing water at 1, 8 and 15°C. Measurements of the specific weight, turgor, and of the egg-membrane strength were made at intervals of several minutes. It has been found that the water intake, turgor, as well as the egg-membrane strength clearly depend on the temperature of the water. Temperature does not affect the ultimate value of water uptake, or of the egg-membrane strength, but it influences the dynamics of these processes immediately after the egg is placed in the water.

Aleksander Winnicki and Maria Słomianko: **Taking-up of water by the eggs of the crab *Rhithropanopeus harrisi* (Gould) subsp. *Tridentatus* (Maitland) during embryonic development.** *Zoologica Poloniae* 20 (1970) 415-422.

The eggs of the crab *Rhithropanopeus* do not possess a distinct perivitelline space. Therefore the eggs take in water direct from the environment, throughout their development. As a result, the egg size increases and the specific gravity of the egg decreases. The egg membrane is all the time permeable to water and NaCl. This seems to be important as regards the process of hatching out of the larvae.

FAST ELECTRONIC EQUIPMENT USED IN THE MEASUREMENT OF FISSION CROSS-SECTIONS by G. FRAYSSE, A. PROSDOCIMI and J. WINTER.

European Atomic Energy Community - EURATOM.

Joint Nuclear Research Center.

Geel Establishment - Belgium.

Central Nuclear Measurements Bureau.

Reprinted from Proceedings of "Colloque International sur l'Electronique Nucléaire" Paris, November 25-27, 1963, pp. 607-617.

The availability of detectors producing very short pulses has profoundly changed experiments measuring fission cross-sections of isotopes with high specific  $\alpha$ -activity.

The two criteria for the electronic equipment employed are :

- that it should have an extremely  resolution time, and
- that it should have an extremely  counting rate.

A SIMPLIFIED METHOD FOR KINEMATIC CALCULATIONS OF  
NUCLEAR REACTIONS by J. WINTER and H. SCHMID

European Atomic Energy Community — EURATOM  
Joint Nuclear Research Center — Geel Establishment (Belgium)  
Central Bureau for Nuclear Measurements — CBNM  
Brussels, July 1968 - 16 Pages - 2 Figures - FB 40

A simplified method of presentation of kinematic relationships in nuclear reactions is given. It allows to obtain in a convenient way the energy of the reaction products as a function of the angle of emission in the laboratory frame for non-relativistic reactions. It has been shown that after the introduction of normalized quantities the kinematics of all non-relativistic

THEORETICAL AND EXPERIMENTAL STUDY OF A FAST INTEGRAL  
DISCRIMINATOR by J. WINTER.

Joint Nuclear Research Center - Geel Establishment (Belgium).

Central Bureau for Nuclear Measurements - CBNM.

Reprinted from "Nuclear Instruments and Methods", Vol. 28 - 1964 - pp. 229-236.

The tunnel diode univibrator is calculated in detail and its switching cycles are obtained by a graphical integration of its differential equation. This univibrator was experimentally studied under different working conditions. An integral discriminator with a measuring range from 0.1 V to 2.5 V and a (constant) time resolution of 13 nsec is described.

**ELECTRO-SLAG WELDS IN REACTOR STEELS**  
by O. BECKEN and H. WIRTZ (SLV)

European Atomic Energy Community - EURATOM  
EURATOM/US Agreement for Cooperation  
EURAE C Report No. 1408 prepared by the Schweisstechnischen  
Lehr- und Versuchsanstalt Duisburg (Germany)  
Euratom Contract No. 046-61-3 RDD  
Brussels, February 1966 - 58 Pages - 16 Figures - FB 70

The work is split up into the following two groups :

1. Investigation of the effect of various parameters on quality factors, especially the notch-impact strength, of electro-slag welds in reactor steels, and on their improvement.
2. Development of a new welding technique for circular welds by the electro-slag technique.

Using preferably steel ASTM 302 Grade B and 13 CrMo 44, tests were carried out to determine the effect on the macro- and microstructure, and also on quality factors, of welding powder additions of Al, AlN, Ni, B, V, Mo, Ti and combined deoxidizing
